                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises the amino acid and coding sequences of survivin-like proteins. The survivin-like DNA and protein sequences are useful in diagnostics and socreening compounds for treating various cancers and apoptosis abnormality, including gene therapy. The present DNA sequence encodes a survivin-like protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Baculovirus IAP repeat domain or RING-finger domain-containing survivin-
like polypeptides and encoded DNAs, applicable in diagnosis and screening
compounds for treating various cancers and apoptosis abnormality.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tanaka

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises the amino acid and coding sequences of survivi like proteins. The survivin-like DNA and protein sequences are useful diagnostics and screening compounds for treating various cancers and apoptosis abnormality, including gene therapy. The present DNA sequence encodes a survivin-like protein of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down-created the specific cancers (e.g. about 1031 genes up-regulated in caute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer caute lymphocytic leukemia. ACC72641 to ACC72860 represent cancer related gene nucleotide sequences which encode the proteins given in CC absence of a pathological cell in a patient; (2) an expression vector cc comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a compound to a pathological cell in a cc drug screening assay. The nucleic acid is useful as diagnostic markers or comparising assay. The nucleic acid is useful as diagnostic markers or compound to a pathology, e.g. cancer (e.g. cancer of the bone marrow, cc diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, cc drug screening, particularly for identifying agents for treating these cc pathologies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17-SEP-2001; 2001US-0323469P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a DNA vaccine effective for eliciting an immune response against cancer cells which comprises a DNA construct operably encoding at least one cancer-associated Inhibitor of Apoptosis-family protein (IAP-family protein) and at least one immunoactive gene product in a pharmaceutical carrier. The invention is useful for treating cancer such as lung cancer, colorectal carcer and melanoma. The present sequence is the human livin alpha splice variant DNA.

The protein is characterised by structural features common to the inhibitor of apoptosis protein family. The HIAP3 polypeptides can be used for the treatment of a disease state in a human patient, which is associated with inappropriate apoptosis and the patient is in need of increased levels of the polypeptide. Rhozymes, which target RNA encoding the polypeptide coding sequences, are useful for decreasing levels of the polypeptide for treatment of inappropriate apoptosis. Antisense nucleotide sequences are also useful for decreasing levels of the polypeptide. Regulation of inhibitor of apoptosis proteins may be useful in treatment of cancer, chronic viral infections, neurodegenerative disorders, chronic heart failure and dysfunctional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Deng

The present sequence encodes a human proliferation and apoptosis related protein (PROAP). The polypeptides and polynucleotides can be used for the diagnosis, treatment and prevention of cell proliferative, immunological and reproductive disorders. Disorders associated with decreased expression or activity of include arteriosclerosis, cirrhosis, hepatitis, psoriasis, melanoma, lymphoma and canneers of the breast, brain and prostate, acquired immune deficiency syndrome (AIDS), allergies, anaemia, asthma, diabetes mellitus, osteoarthritis, endometriosis, uterine fibroids and disruptions of the menstrual cycle. Antibodies against proap can be use in diagnosis of disorders characterized by PROAP e.g. in ELISA (enzyme linked immunosorbent assays) and the polynucleotides may be used to detect and quantify gene expression in biopsied tissues. These techniques can also be used to monitor regulation of PROAP levels during
                                           therapeutic intervention
                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human proliferation and apoptosis related protein polypeptides for diagnosis, treatment and prevention of cell proliferative, immunological and reproductive disorders.

                                                                     The present invention relates to the human proliferation and apoptosis related protein (PROAP) and its encoding nucleic acid. The invention is useful for diagnosing, preventing or treating disorders associated with altered expression or activity of human PROAP, such as cell proliferative (e.g. cancer or atherosclerosis), immunological (e.g. acquired immunodeficiency syndrome (AIDS) or allergies) or reproductive (e.g. infertility) disorders. The invention is also be used in screening for drugs that may be used for treating or preventing the disorders mentioned above and in gene therapy. The present sequence is the human PROAP-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Tang YT,

/note="Organ: Eye; Vector: pcMvSPORT6; A human lens
library (by) was normalized by self-subtraction. One
portion of double stranded plasmid DNA representing the
library was linearized by NotI. This NotI digested library
was used as a template for biotinylated RNA synthesis
using SP6 RNA polymerase. Another portion of the double
stranded plasmid library was converted to single-stranded
circles in vitro using Gene II and Exonuclease II (Life
Technologies). Single-stranded DNA (1 mg) was hybridized
(COt 500) with 41 mg of Bio-RNA and vector blocking
oligonucleotides. The hybridized Bio-RNA/ss-circles were
was performed on the library at the NIH Intramural
Sequencing Center(NISC)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Wistow G

                                                                                                                                                               /note-Dryan: eye; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; UI-E-DWO is a cDNA library containing the following tissue(s): lens. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The first-strand cDNA contains a library tag sequence that is sequence tag for this library is CASTTACCA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307
CURRENT FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR PELLING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-03
PRIOR APPLICATION NUMBER: 60/237,768
PRIOR APPLICATION NUMBER: 60/237,768
PRIOR FILING DATE: 2000-10-03
PRIOR APPLICATION NUMBER: 60/231,498
PRIOR FILING DATE: 2000-09-08
PRIOR FILING DATE: 2000-09-08
PRIOR APPLICATION NUMBER: 60/231,498
PRIOR FILING DATE: 2000-09-08
